

Maya Petrova

Software Engineering Student · maya.petrova@example.com · github.com/maya-example · Berlin

Summary

Third-year Software Engineering student focused on backend development and applied machine learning. Enjoys building clean, well-tested Python APIs and experimenting with LLM-powered tools.

Education

BSc Software Engineering, Example Technical University

2023 – 2027 (expected) · GPA 1.7

- Coursework: Data Structures, Algorithms, Databases (SQL, PostgreSQL), Operating Systems (Linux), Object-Oriented Programming, Machine Learning, Natural Language Processing

Experience

Software Engineering Intern – Nordlicht Analytics (fictional)

Jun 2025 – Sep 2025

- Built REST APIs with FastAPI and PostgreSQL serving model predictions to internal dashboards.
- Containerized services with Docker and added a GitHub Actions CI/CD pipeline running pytest.
- Reduced API response time by 40% by adding query indexes and caching.

Teaching Assistant – Algorithms & Data Structures

Oct 2024 – present

- Run weekly tutorials for 40 students; review Python and Java assignments.

Projects

JobFit – LLM-assisted CV reviewer

Python, FastAPI, OpenAI API, sentence-transformers

- Compared CVs with job ads using embeddings and generated feedback with an LLM.
- Wrote unit tests with pytest; deployed with Docker on a Linux VM.

Sentiment classifier for product reviews

PyTorch, scikit-learn, Pandas, NumPy

- Fine-tuned a small transformer (NLP) model; 91% accuracy on a held-out test set.

Skills

Languages: Python, Java, SQL, C++

Backend: FastAPI, Flask, REST APIs, PostgreSQL, Docker, Git, GitHub, CI/CD, Linux

AI/ML: machine learning, PyTorch, scikit-learn, Pandas, NumPy, NLP, LLMs

Practices: testing (pytest), code reviews, Agile
